

# 7 <sup>OUT OF</sup> 10 KIDS IN CHILD SAFETY SEATS ARE NOT PROPERLY BUCKLED IN.

**Have your child's safety seat inspected. Use booster seats to make seat belts fit kids right.**

Motor vehicle crashes are the leading cause of death of children, ages 3-14. Why? In many cases, children are not properly buckled into their child safety seats. Additionally, some parents don't realize that a booster seat is vital to ensuring children fit safely in their vehicle's seat belt. A properly installed child safety seat can reduce the chance of fatal injury by 71 percent. Children riding in booster seats are nearly 60 percent safer than when restrained only by a seat belt. Your child may be at risk.
